

Increase research productivity in controls, mechatronics, and robotics

- > The global standard in physical platforms for validation
- > Expansive range of solutions for research and education
- > Ready for the latest research topics including intelligent, distributed, and model-based learning and control

For over 30 years, Quanser has been the world leader in advanced systems for prototyping and validating control systems algorithms. Over 80 high-precision plants cover an extensive range of applications and control research topics, including nonlinear control, adaptive control, robust control, optimal control, intelligent control, and system identification.

Quanser products are trusted by researchers and reviewers for their high fidelity, repeatable dynamics and reliability. Over 2,500 institutions and over 3,000 publications attest to Quanser's reputation in helping faculty and students increase performance in research and education.

MAKE YOUR GRANT PROPOSAL STAND OUT

Preparing a grant proposal is stressful and time-consuming work. The funding guidelines are often complex, and the competition for available funding sources is fierce. Leveraging Quanser's technical expertise can boost your chances of securing your next funding proposal by maximizing the persuasiveness and unique characteristics of your funding applications.
